

Alexey Kachaykin

FRONT-END DEVELOPER

SUMMARY:

Deep general understanding of the IT industry, including software, hardware and networks;

Confident knowledge of JavaScript and popular libraries and frameworks based on JavaScript;

Deep understanding of software design principles;

Deep understanding of web performance issues (event loop, rendering lifecycle, asynchronous programming);

Good communication skills.

SKILLS:

Programming and markup languages:

JavaScript, JSON, CSS (Sass, LESS), HTML

Technologies and frameworks:

React, Redux Toolkit, Webpack, Lodash, Node.js, Express, Scss

Database:

MySQL, MongoDB

Database access:

phpMyAdmin

Development environments:

VS Code, VMware

Continuous integration and repository management:

GitHub

html/css - creating a valid semantic structure document, adapting sites for different devices, knowledge of **scss**, **bem**, **react css** module preprocessors, I understand the essence of the methodology and use it in my work;

js - I understand the language well and its features, I can work with third-party libraries and plugins;

react - I can create single page applications, including using react hook, I know the technologies needed for full work with react;

redux toolkit, redux-thunk

I understand how it works and why it is needed,

I can connect and implement basic things (reducer, action), I use asynchronous requests;

git - I can interact with github via the console on basic level;

*Debugging code through Google Chrome developer tools,
using React devtools, Redux devtools*

*Computer science, knowledge of algorithms, DBMS,
understanding of OOP principles.*

You can get acquainted with my practical skills at

github:

Pizzeria shop website:

- ReactJS 18
- TypeScript
- Redux Toolkit
- React Router v6
- Axios
- React Pagination
- Lodash.Debounce
